Apportioned Windfall allowance	'Z' DNA			210	Apportioned district windfall allowance
REJECTED OPTION 2 TOTAL				1003	SUM of all supply forecast for delivery in plan period in 'Z' DNA

Notes: (1) LP Allocation site dddddddddddd - dwellings forecast at Town 'A' outside DNA 'Z' are NOT counted in the DNA Z total supply. (2) The red text relates to made Neighbourhood Plan allocations where all the completions were before the start of the plan period of the local plan, and therefore the supply from the site is nil for the purposed of the DNAHR calculation. (3) The template is for a fictitious town and sites. The numbers are only to illustrate how actual and forecast completions in supply categories are to be recorded/counted. There would be more major sites (10 or more dwellings) and many more minor sites (9 or less dwellings) than listed above. The DNA totals are the sum of the forecast completions in the plan period for the sites in the DNA in the relevant supply categories for the options shown.
